

ENVIRONMENTAL POLICY

Novo Nordisk Pharmatech A/S is a world leader when it comes to supplying quaternary ammonium compounds. We specialize in the manufacture of high quality products for the pharmaceutical and cosmetic industries. We develop and manufacture products such as substituted silica gels for use in the manufacturing process of strategic products by our mother company, Novo Nordisk A/S. Furthermore we supply Insulin manufactured by Novo Nordisk A/S to the biopharmaceutical industry for non-therapeutic use.

The most significant impacts on the environment of our activities are: emission of CO₂, atmospheric emission of organic solvents used in manufacturing processes, disposal of hazardous waste - mainly chemical residues from production and laboratories. In addition, we have a number of outdoor facilities such as ventilation systems, cooling systems and pumps, all of which brings us close to our granted noise limits during evenings and nights. Finally, there is the risk of major accidents related to the handling and storage of hazardous chemicals.

ACTING RESPONSIBLY

We fully realize that the operation of a chemical company may affect the environment. Environmental considerations are therefore integrated in our daily operations, and we find it important to reduce our environmental impact to a minimum.

- › We reduce our waste generation, noise impact and atmospheric emissions.
- › We reduce our CO₂ emission.
- › We operate in a safe way by carrying out risk assessments on all activities.

CONTRIBUTING TO SUSTAINABILITY

We must all act responsibly to attain sustainable development. Novo Nordisk Pharmatech A/S is a company in constant development. We work at developing new products and processes. While doing so, we are dedicated to taking part in reducing the environmental impacts.

- › We will continue to systematically minimize the environmental impact when we develop new products and processes.
- › We will continue to encourage our customers to co-operate in the development of environmentally sound products and services.

ENSURING CLEAR COMMUNICATION

Open, trustworthy and timely stakeholder communication is a prerequisite for our work. This applies to external communication with neighbours, authorities, customers and suppliers, as well as to internal communication with our employees.

- › We regularly report on environmental efforts and performance.
- › We maintain an open and trustworthy dialogue with our stakeholders.
- › We encourage staff environmental awareness to ensure an environmentally sound culture.
